CHAP.

IX. THE MONADIC THEORY

The cell theory and the neurone theory* monadic view—The psychoneuroses and psyc problems of unity make the monadic theory aB inevitable—Two forms of organization of the monads seem equally possible—The hierarchy of dominance and subordination—The collective consciousness formed by fusion or synthesis—Holmes' parallel % between monadic organism and human society.

X. THE DUALISTIC THEORIES 228

Bergson's sketch not a self-consistent whole —Driesch's theory in its earlier form suffered from the anti-psychical and anti-teleological bias of the biologist —These defects largely remedied in his later version.

XL SUMMARY AND CONCLUSIONS FROM THE ARGU-MENT 237

The deadlock of the Mechanical Biology—it is only very partially relieved by the organismic principle— the latter itself becomes intelligible only on frank ad-mission of the efficacy of psychical activities as teleo-logical guiding influences.
